1. Place the OB as shown in the examples below.

2. Place the target ball anywhere on the table, and place the cluster of three obstacle balls anywhere in the 2-diamond by 2-diamond square in the bottom-right corner of the table.

3. Place the CB anywhere you want above (left of) the line through the side pockets.

4. Pocket the OB and have the CB land within 6 inches of the target ball.

5. Repeat step 4 until you get two consecutive successful attempts or until your final CB position doesn’t improve over multiple attempts.

6. Repeat starting at step 1.

NOTE:  
- “cheat” the pocket to change the tangent line direction a little
- a thicker hit (smaller cut angle) takes away more CB speed
- running English maintains or adds CB speed off cushion, reverse English reduces it

**Examples:**
